

SAFECRYPT[®] MANAGED CLOUD ENCRYPTION GATEWAY

FULLY COMPATIBLE WITH:

AND OTHER POPULAR CLOUD STORAGE PROVIDERS

TOTAL LOCKDOWN FOR YOUR SENSITIVE DATA IN THE CLOUD

Cloud services like Dropbox and Google Drive make it fast, easy and affordable to store and share data. We use these services for everything from valuable intellectual property to corporate documents and even precious family photos. But think about this: your data is stored in an unknown place, managed by unknown people with unknown access. Servers get hacked, secrets get leaked and people are careless. SafeCrypt Managed from DataLocker provides military grade encryption that works with all your cloud storage providers.

CENTRALLY MANAGE YOUR CLOUD PROTECTION

SafeCrypt Managed combines AES 256-bit virtual drive encryption with a secure connection to a central management console. SafeConsole[®] is a secure online or on-premise management platform able to deploy and apply security policies to thousands of SafeCrypt Managed virtual drives easily and efficiently.

SAFECRYPT MANAGED FEATURES

SafeConsole Management. Customize minimum password requirements for encrypted drives. Allow users to request a password reset, view file activity with geolocation info and more!

Fully Compatible. SafeCrypt Managed works with Dropbox, Google Drive, OneDrive, Box and any other cloud service.

Advanced Security. SafeCrypt Managed offers advanced features like encrypted file names, optional 2-factor authentication, brute force attack defense and zero knowledge software design.

New or existing SafeConsole account required.

HOW DOES SAFECRYPT WORK?

SafeCrypt Managed utilizes an AES 256-bit mode encryption library to create a virtual drive that encrypts all data saved to it.

Run SafeCrypt Managed setup wizard, and connect SafeCrypt Managed to SafeConsole by using the server's connection token.

SafeCrypt Managed can even be linked to a local folder to encrypt files anywhere on your machine.

Everything saved to the SafeCrypt Managed virtual drive is fully encrypted before it is transmitted to and stored in the cloud.

Setup custom policies within SafeConsole to customize user functionality of their virtual drives.

The encrypted files and file names in the SafeCrypt Managed drive are automatically synced with your cloud storage provider.

To access your files, simply open your SafeCrypt Managed drive. Your files are decrypted on the fly at your desktop.

TECHNICAL SPECIFICATIONS

CRYPTOGRAPHIC PROCESSES

256-Bit AES / CFB Mode

ZERO KNOWLEDGE SOFTWARE

Yes

LICENSE TYPE

Yearly (multi-year available)

OPERATING SYSTEM WINDOWS

Windows 7 / 8 / 10

2-FACTOR AUTHENTICATION

Optional via TOTP (ie: Google Authenticator, Authy)

PART NUMBER:

SCM-1, SCM-2, SCM-3, SCM-1R, SCM-2R, SCM-3R
