WHAT IS ZONEBUILDER?

Zonebuilder is a tool to create a “trusted zone” of computers that makes using your SafeConsole managed devices even more Simply Secure.

HOW TO CREATE A “TRUSTED ZONE”

1. White list the computer IP address in SafeConsole
2. Plug-in your SafeConsole Ready storage device and enter the device password.
   Your computer has been registered into your Trusted Zone!

WITHIN YOUR “TRUSTED ZONE”, YOU CAN:

- **RESTRICT** device access to computers inside your Trusted Zone.
- **AUTO-UNLOCK** your storage device eliminating the need to enter your password. It makes sharing files within your Trusted Zone quick and easy. This feature uses RSA client certificates for authentication.
USE CASE: DLP SOLUTION

Prevent your team from copying sensitive data from your Trusted Zone to an unknown computer.

When coupled with a Windows group policy that white lists approved USB storage devices, SafeConsole can serve as a first line of defense to prevent the loss of sensitive files.

BENEFIT

Only approved SafeConsole USB storage devices can be used within your Trusted Zone and those devices cannot be used outside the Zone.
USE CASE: SECURE FILE SHARING

Sharing your encrypted device with the team using ‘Auto-unlock’ mode.

**DEVICE OWNER**

**TRUSTED COMPUTER 1**

**DEVICE**

**TRUSTED COMPUTER 2**

**TRUSTED COMPUTER 3**

Device will **auto-unlock** after your computers are trusted.

Optionally require a live SafeConsole connection to **Auto-unlock**.

**BENEFIT**

The device owner does not have to share the device password when sharing files with other members within the trusted zone.
